SPRING BOOT CHAPTER 1 COMPONENT

EXAMPLE:

Displaying welcome message using ApplicationContext and getBean.

FirstComponentTopicApplication.java | Demostudent.java

```java
package com.example.FirstComponentTopic;

import org.springframework.stereotype.Component;

@Component  2 usages
public class Demostudent {
    public void display()  no usages
    {
        System.out.println("Welcome");
    }

}

```

FirstComponentTopicApplication.java | Demostudent.java

```java
package com.example.FirstComponentTopic;

import org.springframework.boot.SpringApplication;
import org.springframework.boot.autoconfigure.SpringBootApplication;
import org.springframework.context.ApplicationContext;

@SpringBootApplication
public class FirstComponentTopicApplication {
    public static void main(String[] args) {
        ApplicationContext context=SpringApplication.run(FirstComponentTopicApplication.class, args);
        Demostudent d= context.getBean(Demostudent.class);
        d.display();
    }
}

```

FirstComponentTopicApplication

Example 2:

Displaying details of user using new class.

FirstComponentTopicApplication.java | DisplayDetails.java | Demostudent.java

```java
package com.example.FirstComponentTopic;
import org.springframework.stereotype.Component;

@Component  2 usages
public class DisplayDetails {
    int id=101;  1 usage
    String name="Sujitha";  1 usage
    public void displaydetails()  1 usage
    {
        System.out.println();
        System.out.println("Displaying user details");
        System.out.println("ID: "+id);
        System.out.println("Name: "+name);
    }
}
```

FirstComponentTopicApplication.java | DisplayDetails.java | Demostudent.java

```java
package com.example.FirstComponentTopic;

import org.springframework.boot.SpringApplication;
import org.springframework.boot.autoconfigure.SpringBootApplication;
import org.springframework.context.ApplicationContext;

@SpringBootApplication
public class FirstComponentTopicApplication {
    public static void main(String[] args) {
        ApplicationContext context=SpringApplication.run(FirstComponentTopicApplication.class, args);
        Demostudent d= context.getBean(Demostudent.class);
        d.display();
        DisplayDetails d1=context.getBean(DisplayDetails.class);
        d1.displaydetails();
    }
}
```

```
2026-10-13T23:58:09.633+05:30  INFO 36288 --- [FirstComponentTopic] [           main] c.e.F.FirstComponentTopicAppli
